U.S. Citizen

Work Experience

Eldora Mountain

October 2024 - April 2025

Snowmaker + Controller + Lift Operations – Nederland, CO

- Run snowmaking equipment per weather conditions to create a high quality retail manufactured snow from the water and air resources available
- Operate complex computer systems controlling high pressure water and air across a large surface and subsurface on-hill distribution network
- Monitor pumps and compressors to ensure efficient operation and while maintaining adequate pressures to meet on hill demand while prevent equipment damage
- Monitor the movement and level of water resources in multiple reservoirs throughout the resort
- Supporting crew operations, communications, safety, and data entry (isno) over radio, phone, and in person
- Complete maintenance logs and checklists while reporting mechanical and safety issues

Sender One Climbing

November 2023 - June 2024

Customer Experience Shift Lead – Santa Anna, CA

Delivers outstanding customer experiences to new visitors, guests, members, and partners who walk through our doors.

- Assist and communicate with fellow team members and other departments such as Youth Programs, Facilities, Groups & Parties, and Route Setting wherever necessary
- Ensures that shifts run efficiently, and checklists are completed
- Lead introduction climbing courses and administer top rope belay & lead climbing certifications
- Is an expert in Sender One's offerings and policies to better assist customers and answer their questions
- Communicates any operational, customer service, risk management, and staff problems with CX Manager

Microchip Technology

February 2018 - June 2018

Product Test Engineer – Chandler, AZ

Responsible for ensuring the testability and manufacturability of integrated circuits from the component feasibility stage through production ramp.

Intel Corp

July 2012- August 2017

Product Development Engineer – Test Content Development- Santa Clara, CA

Mar 2016 – Aug 2017

Responsible for architecture definitions, circuit and logic design/development recommendation for DFT implementations, verification and validation model development, functional and structural test content development.

- Ensuring the testability and manufacturability of high speed serial I/O (KTI/PCIE) content from architectural design through to production ramp for server CPUs on the latest generation process node.
- Test content generation of patterns to support HVM testers.
- Silicon debug to identify functional and DFT related bugs and silicon characterization to validate IP.

Product Development Engineer – Test Content Integration - Phoenix, AZ

Jul 2012 – Mar 2016

Responsible for ensuring the testability and manufacturability of integrated circuits from the component feasibility stage through production ramp.

- Make significant contributions to design, development and validation of circuits. Including evaluation, development and debug of complex test methods.
- Designs, validates, and debugs production test hardware.
- Analyzes and evaluates component specification versus performance to ensure optimal match of component requirements with production equipment capability with specific emphasis on yield analysis and bin split capability.

Certification

- AWS
 - Certified Developer - Associate (Nov-17)
 - Certified Cloud Practitioner (Nov-19)
- UC Irvine
 - Coding Boot Camp (Aug-22)

Education

Bachelor of Science Computer Engineering
Oklahoma State University; Stillwater, OK

Research Assistant

Oklahoma State University
VLSI Computer Architecture Research Group, Dr. James E. Stine

Web Development Tech Stack

- HTML + CSS
- React + Javascript
- Node.js
- MongoDB / MySQL
- GraphQL / REST
- AWS / Docker / Railway
- GIT + GitHub

May 2012

Jan-May 2012
